Project information | Proposed utility subject to development and regulatory review

KORKED (KRK)

Project Whitepaper | Version 1.0 | October 14, 2026

Project overview

Korked (KRK) is an existing ERC-20 token on the Ethereum mainnet associated with Half Korked Winery Ltd., an Alberta, Canada business. The project is exploring digital engagement features connected with the Korked & Confused wine-quiz app. The token exists today; the utility and distribution features described below are proposals, not a representation that those features are live.

Token information

Token name	Korked
Symbol	KRK
Network / standard	Ethereum mainnet / ERC-20
Contract address	0xB561E60E426c183D37497D5EBf1Dc6741df94309
Reported token supply	100,000,000 KRK
Associated organization	Half Korked Winery Ltd.
Project website	https://halfkorkedwinery.com
App website	https://korked-and-confused.web.app

Purpose and proposed utility

The proposed role of KRK is to support participation in digital experiences, including quizzes, referrals, and community engagement through the Korked & Confused app. Any token-based participation, eligibility rules, transfers, or other functionality would be subject to technical implementation, anti-abuse safeguards, and applicable legal requirements.

Illustrative participation model - not launched

The project has considered a one-time quiz-completion allocation, limited referral allocations, and certain other verified participation activities. These ideas remain under review. No participation activity, allocation amount, distribution threshold, or future token benefit is guaranteed by this document.

Development status and roadmap

Existing: Ethereum ERC-20 token and Korked & Confused web app. **Under consideration:** user accounts, verifiable eligibility criteria, anti-fraud controls, and optional on-chain token distribution. **Before launch of token incentives:** obtain relevant Canadian legal and regulatory guidance, define final program terms, test security, and publish an

updated project specification.

Token transfers and market activity

KRK is an Ethereum token and can technically be transferred using compatible wallets, subject to the token contract and network conditions. This whitepaper does not announce a trading venue, exchange listing, liquidity pool, redemption facility, price support, or any right to profits. Third-party trading availability is not promised.

Risks and limitations

Digital tokens involve risks including loss of private keys, irreversible transfers, Ethereum transaction fees, smart-contract vulnerabilities, phishing, market volatility, limited liquidity, and regulatory change. The project has not represented that its contract or future application components have undergone an independent security audit. Users should independently verify the contract address before interacting with KRK.

Legal and regulatory status

The project is seeking clarity regarding Canadian legal and regulatory obligations before introducing token incentives or related services. This document is informational only; it is not an offer to sell securities, an investment solicitation, or legal or financial advice. Whether any particular activity is permissible depends on its final design and applicable law.

Governance, updates, and contact

Half Korked Winery Ltd. is the organization associated with this project. Proposed features and timelines may change or be cancelled. Material changes should be reflected in a future whitepaper revision. Contact: halfkorked@outlook.com. Website: https://halfkorkedwinery.com.

Document note

Version 1.0 is a preliminary project description prepared for public project information and token-directory submission. On-chain details, including supply and contract characteristics, should be checked against Ethereum blockchain records.
